

SMALLPOX OP IS OUT IN THE OPEN

OCTOBER 7. The White House and the US Centers for Disease Control (CDC) are fleshing out their smallpox vaccine plan for America. As I predicted, the first phase is voluntary. That's the hook.

500,000 health care workers can opt to get the shots. After that, "10 million emergency responders" can step up to the plate and get theirs.

"We live in a society that values choice," stated Julie Gerberding, CDC director. "If we have vaccine and we have data to accurately assess the safety, one school of thought is that informed people may want to have the choice of getting vaccine or not."

Talks just like a lawyer facing the possibility of billion-dollar liability suits for vaccine damage. Read her waffling remark again. Lots of conditionals in it. The translation is, "The FDA has not yet approved this vaccine. The CDC, at any rate, does not want to take responsibility for what happens to people who get the shot."

Also note a lurking military angle: The Department of Defense has placed an order for 1 million doses of the vaccine, to be delivered within the next month. Oops. THAT part of the program will obviously not be voluntary. The Pentagon is not in the habit of asking soldiers if they want ANYTHING.

In the MSNBC coverage of the new wrinkles of this vaccine plan, we get a truly boggling comment from a US health official. If you recall, months ago, the feds were suggesting that a very small number of people---whose immune systems were already suppressed---could die or become severely maimed by the shots. Well now, lookie here. Dr. Anthony Fauci, director of the National Institute of Allergy and Infectious Diseases, tells MSNBC that between 30 and 50 MILLION Americans should not get the vaccine because their immune systems are not up to it.

In other words, working from a population estimate of 300 million people in the US, ONE IN TEN PEOPLE COULD HAVE VERY SERIOUS PROBLEMS FROM THE SHOT. PROBLEMS INCLUDING DEATH.

Hello?

MSNBC, in its usual mindless fashion, follows Fauci's remark with this absurd insert, the same insert that has been parroted since the beginning of the whole vaccine campaign: "For every 1 million vaccinated, 15 people are likely to suffer life-threatening complications and one or two would die."

HEY. The man just got through telling you that 1 OUT OF TEN AMERICANS COULD BE RIPPED BY THE VACCINE. WAKE UP. SMELL THE POISON.

Later in the MSNBC piece, we learn about a further step in the voluntary plan. Phase two. "...as many as 7.5 million medical workers would be offered vaccine..."

If my arithmetic is correct, 1 out of 40 Americans is a medical worker. Wow. Does this tell you something about which way this country is going?

Staggering. STAGGERING. And I'm sure they aren't counting med insurance employees and routine office employees of pharmaceutical companies and office employees of state and federal health agencies and people who work for medical supply firms. Adding in THOSE figures, how many people in the US make their living from the medical cartel?

THE US IS BECOMING ONE GIANT HOSPITAL.

I'm blown away.

Finally, let's think about this: How did the feds decide that smallpox would become the first huge biowar threat against the American population? How did they pull that particular rabbit out of the hat? Why not anthrax, the very germ that already has made headlines? Why not brucella or botulism or any of 800 or so germ substances?

Have we seen any credible evidence that somebody somewhere is readying a smallpox attack?

THE ANSWER TO THAT IS NO.

More lunacy. Which suggests that the whole point of this OP is giving millions of people the SMALLPOX VACCINE. THAT'S THE BIO-ATTACK.
