>> More Vaccines for California Kids Defeated for First Time

>>

>> [This report from Rick Rollens.]

>>

>> An historic action was taken this week by the California
Legislature

>> by defeating two bills that would have added six new shots to the already
>> overcrowded childhood immunization schedule (currently 39 doses of
various

>> vaccines by the age of two years old). The action on Wednesday was the
>first time in the history of California that legislation adding new
vaccines

>to

>> the mandatory childhood immunization list have been defeated. The two new
>> required immunizations were for Hepatitis A and Prevnar, a vaccine that
>has been falsely promoted as an ear ache preventative vaccine. If these
two

>> vaccines were added to the Childhood Immunization Schedule, it would have
>> required two doses of Hep A and four doses of Prevnar.

>> Both bills passed the State Assembly without opposition and on
>nearly unanimous votes. Although strongly supported by the vaccine
>manufacturers

>> and the public health community before the Senate Health and Human
>Services Committee on Wednesday, it was the testimony of two parents, a
mother

>whose baby was killed by vaccines, and the father of a vaccine induced
>autistic

>> son whose testimony before the committee resulted in the bills failing
>> passage. It was a classic case of David vs. Goliath (or in this case
David

>> and Dawn vs. Goliath)!

>> The Committee also voted to hold hearings on the bills to ascertain
>if there was any justification to subject millions of children in
California

>to these six new shots, and to establish a scientifically based process to
>> review the process and approval of any new vaccine mandates before bills
>are introduced to require their use. The Committee has placed a moratorium
on

>> adding any new vaccines until that process has been completed. Opposition
>> testimony centered on the facts that:

>> 1. There are over 300 new vaccines in the pipeline;

>> 2. California children are already subjected to 39 doses of

vaccines

>> by the age of two years old;

>> 3. That vaccines contain mercury, formaldehyde, aluminum, MSG, live
>> viruses, killed bacteria, and other potent toxic agents;

>> 4. That there has never been a single safety study on the
>interaction of any of these vaccines or any long term safety studies;

>> 5. That the need to mandate that all of California's children be
>> vaccinated with Hep. A vaccine was unfounded and unnecessary; and

>> 6. That Prevnar has only been in use for less than one year,
>resulting in large numbers of adverse reactions including death.
